

**NEW!**

# PANCRETE

***Pan in a Can!***

## **THAT'S RIGHT...**

After a few short years when your condensate pan becomes corroded and surfaces become irregular, troublesome leaks start. Forget about rotting pans, expensive replacement and down time. You need the Pan in a Can.

Imagine pouring a brand new pan. Pancrete covers the rotted pan and makes the surface like new again. It automatically fills in pits and irregular surface characteristics, providing a smooth, enamel surface that is unaffected by harsh coil cleaners.

## **Protect your investment now**

Pouring Pancrete in your pan keeps it new, extending the life dramatically. It's better than the factory installed pan. Prevention is always the best economical policy.

Pancrete forms a durable level pan, eliminating low spots that inhibit drainage. Water goes where it should - down the drain.
